A Paradise in the Pacific.

In the waters of the Southern Pacific ocean, two-thirds of the way from California to Australia, and directly on the track of commerce between the two English-speaking countries. on the shores on the "quict' sea, are situated the Fiji or Viti islands. Of service hitherto mainly as a wayside inn for travelers on the great highway, and comparatively unknown except to sailors and wayfarers, this group of two hundred and twentyave Islands bid fair to become of considerable importance on account of its wonderful fertility of soil and genia climate.

The soil of the eighty inhabited is lands is described as a 'deep yellow loam," and the tropical climate and abundance of water cover the mountains up to their very summits with a luxuriant vegetation. In this region plants grow with a marvellous rapidity, and if Jack ever planted that traditional bean-stalk he must have chosen one of the Fiji islands as the place of its nativity. Turnips, radshes, and mustard, we are told, after being sown twenty-four hours, are above the surface, and in four weeks are fit for use. Its productions are as varied in their nature as they are ex cellent in quality. There are no less than nine varieties of the bread-fruit six of the onnama; three of the plan tain, and three of the cacoa-nut. while oranges, plumbs, the Chinese tea-plant, caraway, nutmeg, sugar cane, arrowroot, capsicum, sarsapa rilla (not bettied), cape gooseberry aupineapples flourish amid all the changes of the sensons. But it is chiefly on account of the advantagepossessed by times islands for the production of cotton and the comparative ly recent (1858-1860) discovery of this fact that their commercial value is shighly rated. Experiments with th best quality of sea island cotton havplaced the country in the front rank for the growth o. the stiple, and s valuable is the grade raised, that i brings readily a dollar a pound in European marks 8 This cotton, b the way, as not an annual plant, as in the sen islands of Carolina, but persunial, and needs to be planted but once in Fiji. Once planted, it has only to be tended and the crop gathered year after year. The natives in the other islands in the Polynesian groups are obtained for laborers on the cotton plantations at fifteen deliars a year,

and are reported to work well, Buch being the productiveness of the soil, the value of the crop, the the cheapness of the labor, and the cost of feeding the workers so small no wonder that these islands are regarded with especial favor by fortune seekers It is interesting and encouraging to learn that the king o this formerly "caunibal island" is liberal and sagacious ruler. He has conquered has propensity for mission ary food and "white meat," has embraced Christianity, encouraged im migration, adopted civilized ideas has established a constitutional gov ernment and invited into his cabinet

intelligent Americans and Europe The remarkable growth of the petroleum trade is illustrated in the facthat white in 1860 a market con d to be found for ten million galions, i 1871 the demand for exportatione is inadequately supplied by a bundled and forty-one minum gadens. In the Pennsylvania off regums, a territory extending some severly miles t length by about thir y in breadth more than five thousand wells are it operation, yielding a product of about seventeen thousand barres a day. Many fortunes have been won and losmuring the fluctuation which have at tended the development of the on trade; and some a time who were the most energetic in their efforts to build up the business have been in pelessly awamped by the reverses incidental t the etaunenment of a new industry Others have been rewarded with almost undaterrupted success, due lo a great measure, without doubt to careful calcabation, pu ent manage ment, and herve while a no discourage ments were sufficient to impair. Mc F Prentice of this city individually owns and controls between thirty the use of and tony thousand seres of oil isn in to Pennsylvania and West Virginia; and his pasome from his ol-Interest above is estimated at two or three thousand dollars a cay. He i-Mr. J. S McCray, who inherited a farm of two numbers seres of unted in the centre of the on producing section, in the exciting times of 1861 5 resisted all the tempting offers made bim for his he mestead, and still holds his place intact. It is but a little more than a year ago that, after having by honest industry suco-eded in accumu-

NORTH POLE.

The Discovery of the North Pole-Report of Lieutenant Payer, of the German Expedition-The Best Boute to the North Pole.

The Geographical and Statistical ociety of Frankfort-on-the-Main as received a report from Lieutenent Julius Payer, one of the two leaders of the German expedition to he North Pole. It is dated "October 9, from the Norwegian coast, on board the ship Harald Haarfage,' and presents some new facts of very great interest. After some introducory remarks the report goes on to

The preliminary expedition for the exploration of the sea between Spitzergen and Nova Zembla, which is o be followed next year by an expedition of greater magnitude, has schieved an unexpected result-one which is opposed to all previous calcipal object of the expedition-viz: he exploration of King Karl's Land to you by Naval Lleutenant Weyprecht personally. As an offset gainst this fail re there appears, tradi.ion. Of gold, in coins, gold du-t sive open polar sea in place of the unknown waters, which were forsilver, 506 ounces; and of precious nerly considered unnavagable. The Russians, the Swedes, and even the piracy and murder, and hung is attempted to penetrate even as far chains, with six of his crew.
